

ROLLER GATES

MWRD of Greater Chicago Deep Tunnel Project

Steel-Fab is designing and manufacturing four 18 ft. wide x 28 ft. tall stainless steel roller gates for Walsh Construction to be installed in the Metropolitan Water Reclamation District (MWRD) of Greater Chicago's Deep Tunnel Project.

Two reservoirs being built at the Thornton Quarry aim to control backflows into Lake Michigan and prevent flooding in the Chicago metropolitan area.

The Thornton Reservoir, a major component in the Deep Tunnel Project, will provide nearly 8 billion gallons of flood water storage capacity.
